RemoteSpeech is Proud to Announce the Official Launch of VirtualTx

A custom software application that offers cutting-edge technology for speech pathology in the age of virtual therapy.

WHAT IS VIRTUALTX?

VirtualTx was developed to address the needs for remote therapy, using the pioneering strategies for telepractice developed by RemoteSpeech, and the staffing expertise of Abington Speech Pathology within its 20+ years of operation. VirtualTx, powered by RemoteSpeech, is a cloud-based software application web portal for all things related to service delivery of Speech Pathology. VirtualTx borrows from the virtual features of RemoteSpeech for telepractice, and the staffing expertise of Abington Speech Pathology, to create a “one-stop-shop” for virtual therapy that is interactive, engaging and effective in one user-friendly online environment.

WHY WAS VIRTUALTX CREATED?

Covid 19 affected every person and business, and the world of Speech-Language Pathology was no exception. As patients, parents, and school districts began the transition to “virtual” treatment, RemoteSpeech was able to provide their resources with a 5+ year headstart in telepractice.

-more-

However, transitioning to “remote” treatments was just the beginning as operational challenges soon became apparent within the first weeks of Covid. Research has found that pre-Covid in 2019, over 350,000 students in the United States alone were without access to therapy that have mandated services owed to them. The ability to vet quality service providers and to provide

quality therapy using adaptive learning was at the forefront of the transition to virtual therapy. A national shortage of certified Speech-Language Pathologists and a low student reach emerged as substantial challenges. Resources for quality therapy sessions were highly inadequate and billing processes were cumbersome. VirtualTx was created to address these very challenges.

“I created VirtualTx in response to challenges within the industry, says Orna Kempler-Azulay, President and CEO of Abington Speech Pathology Services., INC. and RemoteSpeech, LLC. “Since our inception, we have paid close attention to industry trends and demands, and have worked strategically to address these challenges as efficiently as possible. We launched RemoteSpeech.com more than five years ago, which has provided us with a strong vantage point with Covid 19. We created VirtualTx based upon the operational challenges that patients, parents, therapists and school districts encounter with programs for speech language pathology.”

WHAT ARE THE FEATURES OF VIRTUALTX?

VirtualTx is a virtual environment that provides its users with a private log-in interface to seamlessly access its integrated features for all things related to therapy – including assessments, evaluations, treatment and service management. VirtualTx is interactive, engaging, and effective – and in many cases, is able to outperform the alternative of treatment in-person.

VirtualTx is cloud-based. Users can access VirtualTx with any device and internet connection – (though a laptop or tablet is recommended for an optimal therapy experience). Users are provided with a username and password to access the dashboard of the portal from which they can navigate through their account. VirtualTx offers a multi-users interface, and unique experience for patients, parents, school administrators and therapists.

Therapy is delivered through the platform through video conferencing and next generation video calling with crystal clear voice and high-definition video delivery. Zoom integration offers security features that are in compliance with HIPPA. The recording feature allows users to download their therapy sessions to both monitor progress and share within the patients’ support network (parents, loved ones, therapists and school districts).

Universal features include a dashboard overview of the user’s account, with quick access to contacts, sessions completed and upcoming sessions. Calendar integration offers a birds-eye view of daily appointments. The notification feature keeps users on-track with their “to-do” list.

The schedule feature provides a record of all appointments, sorted by those that have been “completed” and “scheduled.” The appointment overview provides the contact name, service type, appointment date and appointment time with a direct one-click instant login to therapy sessions

The live-chat interface offers the ability to reach a patient or therapist in one-click. Message are stored with email integration.

The materials library offers an extensive database for treatment, based on 5+ years of research and hundreds of links that are continually updated. Materials are sorted by categories for specific needs, including speech, occupational and physical from pediatrics to adults.

The billing section manages invoicing and payment processing on a secured platform, with invoicing templates. The reporting feature stores all related reports with one-click access and sharing capability.

HOW DO I GET STARTED?

VirtualTx is currently available to all clients of RemoteSpeech, both within school districts and for individual treatment. The onboarding process is streamlined through comprehensive training, ongoing mentorship, and the most advanced technology. Schedule a complimentary consultation on our website at www.RemoteSpeech.com; via email at Admin@RemoteSpeech.com, or by phone at (844) 659-5599 in the US, or at +1(215) 659-5599 outside of the US.

About RemoteSpeech

has pioneered effective speech therapy in an online environment, that connects the nation’s leading Speech-Language Pathologists and school psychologists with children, adults, and educators for live, face-to-face interactions for the delivery of speech therapy. RemoteSpeech serves as the platform for these connections by providing the infrastructure with crystal clear voice transmissions through next-generation video calling, and the sharpest video with high-definition video delivery. Through its 20+ years of operation, RemoteSpeech has perfected a service model for telepractice that in many ways surpasses the alternative option, of in-person therapy with advanced state-of-the-art games, activities, and interactive screen sharing.
